Barracuda Security, Networking & Storage Solutions

A PREFERRED BARRACUDA DEALER

How does your security measure up?

Cloud Services

Barracuda Web Security *Flex* ™ is a cloud-based Web filtering and security service that quickly gives administrators all the information and policy enforcement tools needed to isolate users from Internet threats, conserve network bandwidth and filter content for compliance and productivity. As a cloud-based service with flexible deployment options, Barracuda Web Security Flex is the easy and affordable way to manage Web access even at highly-distributed organizations needing to manage large numbers of remote users off the network.

The **Barracuda Email Security Service** is a comprehensive and affordable cloud-based email security service that protects both inbound and outbound email against the latest spam, viruses, worms, phishing and denial of service attacks. The Barracuda Email Security Service leverages advanced security technologies from the industry-leading Barracuda Spam & Virus Firewall and features rich multiple cloud-based protection.

Cloud Data Protection

The **Barracuda Backup Service** combines automatic local data backup via the Barracuda Backup Server with secure online backups. The Barracuda Backup Service copies data from any computer or storage platform and provides fast local storage and restores. The Barracuda Backup Service safely maintains backup data offsite using efficient replication techniques designed to conserve bandwidth and minimize the cost of disaster recovery.

The **Barracuda Message Archiver** is a complete and affordable email archiving solution, enabling you to effectively index and preserve all emails, enhance operational efficiencies and enforce policies for regulatory compliance. By leveraging standard policies and seamless access to messages, email content is fully indexed and backed up to enable administrators, auditors and end users quick retrieval of any email message stored in an organization's email archive.

Data Protection

Yosemite Server Backup is a complete and affordable data backup and protection solution, enabling you to backup all of your data and restore it quickly in the event of disaster. With cross-platform support across your Windows and Linux environments, you can apply consistent data protection policies from a single interface. Agents for Microsoft Exchange, Microsoft SQL Server, and Microsoft SharePoint enable you to perform online backups without the need to take your applications offline or make separate exports. Data encryption protects your data at-rest, and data compression makes the most of your media.

Security

The **Barracuda Spam & Virus Firewall** is an integrated hardware and software solution designed to protect your email server from spam, virus, spoofing, phishing and spyware attacks. It leverages 12 comprehensive defense layers to provide industry-leading defense capabilities for any email server within large corporate or small business environments.

The **Barracuda Web Filter** is designed to enforce organizational Internet usage policies through content filtering, application blocking, and best-of-breed spyware protection. It also facilitates automatic removal of spyware from previously infected Windows PC's with the integrated Barracuda Spyware Removal Tool.
